

Concrete for prestressed girders shall be Class A1 with $f'c =$ MPa and $f'ci =$ MPa.

(+) Indicates prestressing strand.

Use strands with an initial prestress force of KN.

Prestressing tendons shall be uncoated, seven-wire, low-relaxation strands, 12.7 mm diameter conforming to AASHTO M203, Grade 1860. See Section 705.4.8 of the Missouri Standard Specifications.

*** At the contractor's option, the location for bent-up strands may be varied from that shown. The total number of bent up strands shall not be changed. One strand tie bar is required for each layer of bent-up strands except at end bents which require one bar on the bottom layer of strands only. No additional payment will be made if additional strand tie bars are required.

*** At the contractor's option, a 40 mm to 45 mm smooth finish strip is permitted to facilitate placement of joint filler for prestressed panels.

LOCATION OF LIFTING LOOPS

SECTION A-A

Strands not shown for clarity.

PART ELEVATION OF GIRDER SPAN (-)

Exterior and interior girders are the same except for coil ties.

BEARING PLATE DETAILS

Galvanize the 12 mm bearing plate (ASTM A709M Grade 250) in accordance with ASTM A123.

Cost of furnishing, galvanizing, and installing the 12 mm bearing plate (ASTM A709M Grade 250) and welded studs in the prestressed girder shall be included in the price bid for Prestressed Concrete I-Girder.

PART ELEVATION OF GIRDER

PART SECTION NEAR VENT HOLE

Place vent holes at or near upgrade 1/3 point of girders and clear reinforcing steel or strands by 40 mm minimum and steel intermediate diaphragm bolt connection by 150 mm minimum.

BILL OF REINFORCING STEEL - EACH GIRDER					BENDING DIAGRAMS	
NO.	SIZE & MARK	ACTUAL LENGTH	SHAPE			
x	#xx-A1	xxxx mm	20			
xxx	#xx-B1	1800 mm	11			
16	#19-B2	1590 mm	11			
xxx	#13-C1	650 mm	10			
xxx	#13-D1	920 mm	9			

All dimensions in bending diagram are out to out.

Hooks and bends shall be in accordance with the CRSI Manual of Standard Practices for Detailing Reinforced Concrete Structures Stirrups and Tie Dimensions.

Actual lengths are measured along centerline bar to the nearest 5 mm.

Minimum clearance to reinforcing shall be 25 mm.

All reinforcement shall be Grade 420.

The two D1 bars may be furnished as one bar at the fabricator's option.

All B1 bars shall be epoxy coated.

SECTION B-B

Strands not shown for clarity.

B1 BAR PERMISSIBLE ALTERNATE SHAPE

Cost of 19.0 mm diameter coil tie rods placed in diaphragms is included in the contract unit price for Prestressed Concrete I-Girder.

Coil ties shall be held in place in the forms by slotted wire-setting studs projecting through forms. Studs are to be left in place or replaced with temporary plugs until girders are erected, then replaced by coil tie rods.

For details of diaphragms, see sheets no. & .

For location of coil inserts at slab drains, see sheet no. .

The 40 mm Ø holes shall be cast in the web for steel intermediate diaphragms. Drilling is not allowed.

For Girder Camber Diagram, see sheet no. .

For location of coil ties, see sheets no. & .

* Length of coil tie rods at exterior girders at end bents = mm.
